**NEW!!! – Introducing: State of the Art
IMCO ENERGY MANAGEMENT SYSTEM Software**

Media Contact: Ruben A. Mirensky – IMCO Associates, Inc. – Tel.: 904-237-1003.

Jacksonville, Florida – August 9, 2017 – IMCO Associates, Inc. is pleased to introduce an innovative state of the art ENERGY MANAGEMENT SYSTEM software as a component of our IMCO - CIMAG MES (Manufacturing Execution System) in the US market.

IMCO EMS enables manufacturing companies to automatically collect data and measure energy consumption in real time. Using that data, the system alerts decision makers of deviations from expected standards and possible equipment malfunction. Those malfunctions can have **safety** and potentially higher repair cost implications.

IMCO EMS's historical data and “what if” capabilities can also help strategic planners optimize energy sources and production load distribution. It is a modular flexible system that seamlessly interfaces with a wide range of ERP and other legacy systems.

In today's complex market that stresses manufacturing in the USA, this unique software can help companies in a wide range of industry types, improve safety, decrease manufacturing costs, avoid delays, increase operator efficiency and improve quality and productivity. **IMCO EMS** works for Electricity, Fuel, Gas and Water.

INCREASE PROFITABILITY with IMCO EMS SOFTWARE

- Real Time Visibility and Control
- Detect Maintenance Issues Before it is Too Late
- Improve Uptime
- Reduce Energy Costs

AVAILABLE BOTH LOCALLY OR CLOUD HOSTED
